

Equipment & Service: Dud Detector

Silgan White Cap MFB

... for contact-free vacuum testing with inductive sensors.

Jars with insufficient or no vacuum are rejected after a defined distance, even when line speeds vary automatically. In addition, the system includes programmable line control and a shut-down function for a chosen output quantity and the ejection of several jars in a row.

Features:

- Sensor display for correct spacing
- Display to indicate current vacuum values and defaults
- Missing cap detector
- Precise vacuum check based on closure panel drawn-in
- Output and reject counter
- Display of reject percentage
- Externally evaluated counter pulses
- Reject pulses of external test functions such as filling level control and flawed packaging
- Installed at a suitable point of an existing conveyor belt in the production line
- Settings for 8 different operating languages
